**Essay**

13. Define and compare liberal feminism, cultural feminism, radical feminism, and women-of-color feminism.

Your essay answers should be at least 2 paragraphs long and will be graded on the following basis.

- Your response must demonstrate accurate factual knowledge of the concepts. (5 points)
- You must support your answer with considerable depth and detail which may include examples/evidence/discussion. (5 points)
13. When discussing feminism, there is not just one way to view it. There are different theoretical perspectives.

Liberal feminism concerns itself with the goal of gender equality. Women and men should have the same opportunities and rights and the way to achieve this is by passing laws that guarantee equal rights. Liberal feminism de-emphasizes biological differences and believes that when opportunities are equal, gender differences will be small.

Cultural feminism emphasizes qualities considered more characteristic of women, such as nurturing and caretaking. Gender differences are real but seen as strengths, not weaknesses. Cultural feminism believes that we should actively foster peace, caring, and cooperation. Gender differences of women are valued, unlike the emphasis of liberal feminism on gender similarities.

Radical feminism believes that sexism is so ingrained in society that it cannot be eliminated by changing laws. Society will have to change its basic beliefs about women and dramatically change its structures so that sexism does not permeate how we think. Radical feminists advocate redesigning society in basic ways.

Women-of-color feminism believes that we must give considerable attention to questions of race, ethnicity and social class and not overemphasize gender. We cannot simply make the changes suggested by the other feminist perspectives. We must understand the unique life circumstances of each woman so we can see her life from her own perspective. Only then can we respond in a sensitive and responsible way.
